TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

AI & Voice: Vapi, Twilio, WhisperX, OpenAI API, Google ADK, PyTorch

Backend & Product: FastAPI, Node.js, Next.js, React

Cloud & Data: AWS Lambda, API Gateway, RDS, S3, GCP Cloud Run, Docker, PostgreSQL, MongoDB

EXPERIENCE

Software Engineer

Feb. 2026 – Present

Zymo Solutions

Remote

- Building backend and voice-agent infrastructure for Zymo's connected-kitchen platform, integrating with Welbilt KitchenConnect's 40,000+ connected appliance IoT ecosystem to bring commercial kitchen equipment data into support and automation workflows
- Developed FastAPI/PostgreSQL microservices for device-status lookup, equipment data normalization, device metadata, troubleshooting context, and support workflow APIs across connected kitchen equipment
- Deployed voice agents through Vapi over IoT equipment data, enabling restaurant staff to check device status, surface troubleshooting information, and route support requests through natural-language interactions

Software Engineer

February 2025 – December 2025

7C Lingo

Lansing, MI

- Built and deployed a production AI voice interviewing platform as the sole engineer, processing 1,700+ interviews and cutting recruiter review time from 25 minutes to under 3 minutes per candidate
- Reduced end-to-end voice latency from 1,340ms to 850ms by redesigning audio pipelines with chunking, async streaming, and batched inference
- Built recruiter dashboard with real-time playback, candidate search, and AI insights, cutting time-to-hire by 60%
- Implemented multi-tenant RBAC on a serverless AWS stack (Lambda, API Gateway, RDS, ECR, S3) for tenant isolation and audit logging across multiple organizations

Software Engineering Intern

June 2024 – August 2024

Tech Mahindra

East Lansing, MI

- Analyzed and mapped data dependencies across legacy database schemas using custom SQL queries, producing actionable migration candidate reports that enabled prioritization of 40+ systems for cloud migration
- Diagnosed integration failures across internal data tools by tracing system logs and config mismatches, resolving recurring issues that blocked cross-team workflows during the migration period

PROJECTS

VoiceOps | *Python, Google ADK, Gemini, Dynatrace MCP, Vapi, GCP Cloud Run*

- Built an AI SRE agent on Google ADK + Gemini, integrating Dynatrace via MCP for anomaly detection and root-cause analysis, with a commit-correlation engine that scores deploys by regression likelihood
- Implemented outbound voice calling (Vapi, Twilio) as a human-in-the-loop approval gate for automated GitHub Actions rollbacks, with service recovery verification

ClawVoice | *TypeScript, Node.js, Twilio, OpenAI*

- Designed developer-facing runtime and CLI abstraction enabling AI agents to handle real phone calls via Twilio, managing stateless webhooks, STT/TTS orchestration, and call state management
- Built a 4-command CLI (init, doctor, start, call) that collapses voice agent setup - gateway installs, webhook config, ngrok tunneling - into under 5 minutes

Cloud Transcription | *Next.js, FastAPI, WhisperX, GCP*

- Automated a manual transcription workflow with a self-hosted pipeline (WhisperX, speaker diarization, segment editing), cutting turnaround from 2-3 hours to under 45 minutes while keeping recordings off third-party APIs
- Cut GCP Cloud Run cold starts from minutes to seconds via on-demand model loading and Docker layer caching

EDUCATION

Michigan State University, College of Engineering, Honors College

Bachelor of Science in Computer Science, Minor in Computational Math

East Lansing, MI

December 2024
