

Sai Byrraju

+1 (517) 402-6868 | byrrajus@msu.edu | [linkedin.com/in/SaiByrraju](https://www.linkedin.com/in/SaiByrraju) | saibyrraju.com

Skills

Languages: Python, TypeScript, JavaScript, SQL, Dart

Frameworks & Tools: FastAPI, PyTorch, Node.js, Next.js, React

Cloud & DevOps: AWS (Lambda, API Gateway, ECR, S3), GCP, Docker, Git, PostgreSQL, MongoDB

Work Experience

7C Lingo | *Software Engineer*

February 2025 – December 2025

- Built and deployed a production AI voice interviewing platform as the sole engineer, processing 1700+ interviews and cutting recruiter review time from 25 minutes to under 3 minutes per candidate
- Reduced end-to-end latency from 1340ms to 850ms by redesigning audio pipelines (chunking, async streaming, batched inference)
- Built recruiter dashboard with real-time interview playback, full-text candidate filtering, and AI insights, cutting time-to-hire by 60%
- Implemented a multi-tenant RBAC architecture on a serverless stack (AWS Lambda, API Gateway, RDS, ECR, S3) for tenant isolation and audit logging across multiple client organizations

Tech Mahindra | *Software Engineering Intern*

June 2024 – August 2024

- Designed SQL queries to map data dependencies across legacy schemas, producing migration candidate reports for the data engineering team to assist with a large-scale cloud migration
- Diagnosed integration failures across internal data tools by tracing system logs and config mismatches, resolving recurring issues that blocked cross-team workflows during the migration period

Whirlpool | *Capstone Full-stack Developer*

January 2024 – May 2024

- Developed a smart oven interface using BERT to deliver personalized recipe recommendations based on user cooking habits, achieving 92% model accuracy across 400+ prototype test sessions validated by Whirlpool's food science team
- Built a full-stack mobile-compatible app in Dart with a JavaScript and Plotly analytics dashboard, iterated through user testing to optimize the recommendation experience

Projects

ClawVoice | *TypeScript, Node.js, Twilio, OpenAI*

March 2026

- Built a developer-facing runtime + CLI enabling AI agents to operate real phone numbers (handling Twilio's stateless webhooks, STT/TTS pipelines, and call orchestration)
- Abstracted the full setup process into a 4-command CLI (init, doctor, start, call), reducing voice agent deployment from gateway installs, webhook config, and ngrok tunneling to under 5 minutes

Cloud-Based Transcript Editor | *Next.js, FastAPI, WhisperX, GCP*

October 2025

- Automated a manual transcription workflow for client meetings, cutting turnaround from 2–3 hours of listening and editing per session to under 45 minutes via automated WhisperX transcription, speaker diarization, and segment-level editing with playback speed control
- Cut Cloud Run cold starts from minutes to seconds via on-demand model loading and Docker layer caching, reducing transcription turnaround for each session

Real-Time Crypto Trading Bot | *Python, JavaScript, Web3*

January 2025

- Built a Solana memecoin sniper monitoring verified Twitter accounts for launches, validating tokens via DEX Screener and executing trades via direct RPC at sub-second latency vs 5-10 seconds manually
- Ran live with real capital and identified MEV sandwich attacks and slippage as the primary profitability constraints under competitive on-chain conditions

Education

Michigan State University | *College of Engineering, Honors College*

December 2024

Bachelor of Science, Computer Science | GPA: 3.69 | Dean's List – 6 semesters | Minor in Business and Computational Mathematics
